

MT. GEORGE QUADRANGLE

MAP EXPLANATION - Figure 1

(Supplement to FER-127)
No. 1

Potentially active fault, based on air photo interpretation by Bryant (5-19-83). Solid line indicates well-defined feature; dashed where less well-defined or approximately located; queried where uncertain. Hachures indicate direction scarp faces.

② Field observations by Bryant (5-20-83). Refer to summary of observations for detailed descriptions.

Geomorphic features indicative of fault recency and/or location, based on air photo interpretation by Bryant (5-19-83)

ld - linear drainage

lr - linear ridge

ltr - linear trough

rld - right-laterally deflected drainage

s - saddle

+ - tonal lineament or vegetation contrast.
